INDEX

A
Abrasion(s)
   paw pad
      management of, 838
Abscess(es)
   anal sac
      sacceluectomy and, 919–921
Acemannan
   in wound management, 746
Adjustable horizontal mattress sutures
   in distal limb and paw injury
      reconstruction, 824
Advancement flaps
   in closure of large trunk wounds, 857
Air-powered weapons, 874
Alginate(s)
   in wound management, 741
Amputation injuries
   distal limb- and paw-related,
      840–843
tail, 922–923
Anal sac abscesses
   sacceluectomy and, 919–921
Anal stricture
   perianal fistulae and, 922–924
Anesthesia/anesthetics
   during bandage change in dogs and cats,
      782
Angiogenesis
   in wound healing process, 672–673
Antibiotics. See Antimicrobial agents
Antimicrobial agents
   in bite wound in dogs management,
      885–886
Antimicrobial dressings
   in primary layer of bandage for wound
      healing in dogs and cats, 773
Aural hematomas
   in dogs and cats
      management of, 808–810
         conservative therapy in,
            809
   drainage in, 809
   incision and suturing in,
      809–810
Axial pattern flaps, 859–863
Axillary wounds, 699

B
Bandage(s)
   dry-to-dry, 759–760
      in wound management in dogs and cats,
         759–791
         anchoring of bandage,
            777–779
         changing bandage, 781–784
         contamination risk during,
            782–783
         damage to wound bed during, 783
         frequency of, 781–782
         sedation or anesthesia during, 782
         who should perform, 783–784
   complications related to
      prevention of, 784–787
   pressure-relief bandages,
      780–781
   primary layer, 759–775
      basic techniques,
         759–763
   dressing materials,
      764–775. See also
      Dressing materials, in
      primary layer of bandage
      for wound healing in dogs
      and cats
   moist wound healing,
      760–763
   wet-to-dry and dry-to-dry,
      759–760
   purposes of, 759
   secondary and tertiary layers,
      775–776
   for surgically closed wounds, 776
   wet-to-dry, 759–760
Bandage-induced wounds, 696–697

Note: Page numbers of article titles are in boldface type.
Bite wounds
in dogs, 882–886
local tissue damage due to, 882
patient and wound evaluation
after, 883–884
systemic effects of, 882
treatment of, 884–885
antibiotics in, 885–886

Body folds
management of, 899

Bone(s)
exposed
wounds related to, 698

Bovine collagen
in primary layer of bandage for
wound healing in dogs and cats,
773–774

Brain trauma
gunshot wound–related
in dogs, 880

Brown recluse spider
wound healing effects of, 704–705

Bullet(s)
described, 873–875

Burn wounds
in dogs, 886–892
assessment of, 887–888
depth of, 886–887
management of, 888–892
debridement options in, 891
escharotomy in, 891–892
medical, 888–891
scar revision and contracture
management in, 892
surgical, 891–892
wound closure options in,
892
overview of, 886

Calcium alginate
in primary layer of bandage for wound
healing in dogs and cats,
765–766

Cast(s)
in wound management in dogs and cats,
779–780
Cast-induced wounds, 696–697
Cat(s)
cutaneous anatomy of, 688
cutaneous wound healing in,
687–692
head and facial wounds in, 793–817. See
also Head and facial wounds, in dogs
and cats
problem wounds in, 707

Corticosteroid(s)
wound healing effects of, 703–704

Cutaneous wound healing
in dogs
vs. cats, 687–692

Cyst(s)
nasal dermoid sinus
management of, 904–905

Debridement
in burn wound management, 891
topical, 753–755
in wound healing process, 670–671
Decubital ulcers, 695–696

Deep circumflex iliac axial pattern flap in closure of large trunk wounds, 863

Dermal sinuses
management of, 902–905
NDSC, 904–905
pilonidal sinus, 902–904

Diaphragmatic advancement in closure of large trunk wounds, 866

Digital limb injuries of, 819–845
amputation injuries, 840–843
causes of, 819
classification of, 820–821
evaluation of, 819–821
interdigital wounds, 836–837
reconstruction for. See also specific techniques, e.g., Skin relaxing and stretching, in distal limb and paw injury reconstruction options, 821–836
second-intention healing in, 822
skin relaxing and stretching in, 822–835
wound healing complications, 836

Direct tissue reapposition in closure of large trunk wounds, 866

Disrupted wounds, 693–695

Distant flaps
in distal limb and paw injury reconstruction, 833

Dog(s)
bite wounds in, 882–886. See also Bite wounds, in dogs
burn wounds in, 886–892. See also Burn wounds, in dogs
cutaneous wound healing in, 687–692
gunshot wounds in, 873–893. See also Gunshot wounds, in dogs
head and facial wounds in, 793–817. See also Head and facial wounds, in dogs and cats
wound management in, 759–791. See also Wound management, in dogs and cats

Dorsal nasal midline in dogs and cats
reconstruction of, 802–803

Dorsal pelvic herniation
tail avulsion and, 916–917

Double mucosal flap
in small alveolar ridge fistula reconstruction in dogs and cats, 812–813

Dressing(s)
in wound management in dogs and cats, 740–745

Dressing materials
in primary layer of bandage for wound healing in dogs and cats, 764–775
antimicrobial dressings, 773
bovine collagen, 773–774
calcium alginate, 765–766
copolymer starch, 766–767
ECM bioscaffolds, 774–775
ECM–derived, 745, 773–775
gauze, 767
highly absorptive dressings, 765–767
hydrocolloid, 740–741, 768–769
hydrogel, 741, 769–770
hypertonic saline, 765
moisture-retentive dressings, 767–771
nonadherent semiocclusive dressings, 771–773
polyurethane film, 770–771
polyurethane foam, 767–768

Dry-to-dry bandages
in primary layer of bandage for wound healing in dogs and cats, 759–760

Ear reconstruction in dogs and cats, 810

ECM. See Extracellular matrix (ECM)

Energy
kinetic formula for, 874

Envenomization
wound healing effects of, 704–705

Episioplasty, 925–926

Epithelialization in wound healing process, 674–675

Escharotomy in burn wound management, 891–892

External abdominal oblique muscle flap in closure of large trunk wounds, 869
Extracellular matrix (ECM) dressings derived from in primary layer of bandage for wound healing in dogs and cats, 773–775
Extracellular matrix (ECM) bioscaffolds in primary layer of bandage for wound healing in dogs and cats, 774–775
in wound management, 745
Extracellular matrix (ECM)–derived dressings in wound management, 745
Eyelid wounds in dogs and cats management of, 806–808

F
Facial folds management of, 899–901
Facial wounds in dogs and cats, 793–817. See also Head and facial wounds, in dogs and cats
Feline axillary wounds, 908
Fibroplasia in wound healing process, 673–674
Fistula(ae) central hard palate in dogs and cats management of, 814–815
large alveolar ridge in dogs and cats management of, 813–814
oronasal in dogs and cats management of, 811–815. See also Oronasal fistula, in dogs and cats, management of
perianal anal stricture and, 922–924
Flap(s) trunk in closure of large trunk wounds, 855–865. See also Trunk flaps, in closure of large trunk wounds
Forelimb and flank fold flaps in closure of large trunk wounds, 858–859
Frontal sinus defects in dogs and cats reconstruction of, 802–803
Full-thickness wall defects closure techniques, 865–869

G
Gauze in primary layer of bandage for wound healing in dogs and cats, 767
Glucose deficiency wound healing effects of, 705
Granuloma(s) lick management of, 908–910
Gunshot wounds in dogs, 873–893 abdominal wounds management of, 880
ballistics and destructive capacity, 874–876
brain trauma–related, 880
cervical wounds management of, 880–881
diagnostic considerations in, 876–878
legal considerations related to, 881–882
ocular wounds management of, 881
orthopedic trauma due to management of, 879
projectile characteristics, 873–874
Sherman and Parrish classification of, 876
shotgun wounds management of, 879
soft-tissue wounds low- and high-velocity management of, 878–879
spinal trauma–related, 880
thoracic cavity–related management of, 880
tissue response to projectiles, 876
treatment recommendations, 878–881
immediate, 876–878
weapons and, 873

H
Hard-to-heal wounds management of, 693–711
Head dorsum of wounds of in dogs and cats management of, 803–806
ventrum of wounds of in dogs and cats, 811
Head and facial wounds
INDEX

in dogs and cats, 793–817
  causes of, 793
  management of, 793–817
  aural hematomas, 808–810
  dorsal nasal midline and
    frontal sinus defects, 802–803
  dorsum of head, 803–806
  ear reconstruction, 810
  cyclid reconstruction, 806–808
  labial reconstruction, 796–800
  lip avulsion in, 795
  nasal planum and
    premaxilla, 800–802
  oronasal fistula, 811–815
  skin flap design and transfer
    in, 793–795
  traumatic cleft palate, 815–816
  ventrum of head–related
    wounds, 811

Head folds
  management of, 901

Hematoma(s)
  aural
    in dogs and cats
      management of, 808–810
      underlying, 694
  Herniation
    dorsal pelvic
      tail avulsion and, 916–917

Honey
  in wound management, 748

Hydrocolloid
  in primary layer of bandage for wound
    healing in dogs and cats, 768–769

Hydrogel
  in primary layer of bandage for
    wound healing in dogs and cats, 769–770
  in wound management, 741

Hydrolloid(s)
  in wound management, 740–741

Hydroma
  management of, 905–907

Hypertonic saline
  in primary layer of bandage for
    wound healing in dogs and cats, 765

Infection(s)
  in dogs and cats
    topical and systemic medications
      for, 750–753
    wound-related, 694, 701–703

Inflammation
  in wound healing process, 670–671

Ingrown tail, 926–928

Inguinal wounds, 699

Interdigital wounds, 836–837

Intertriginous disorders, 895–902
  etiopathogenesis of, 895–896
  management of, 896–902
    body and leg folds, 899
    chronic fibrosing interdigital
      pyoderma, 901–902
    facial folds, 899–901
    head folds, 901
    labial folds, 897–898
    tail folds, 898
    vulvar folds, 899

J

Joint(s)
  wounds over, 699

K

Kinetic energy
  formula for, 874

L

Labial folds
  management of, 897–898

Labial reconstruction
  in dogs and cats, 796–800
    buccal rotation flap, 799–800
    described, 796
    labial advancement flap, 798
    lip commissure reconstruction, 800
    lip flaps, 797–800
    wedge resection, 797

Laceration(s)
  paw pad
    management of, 838

Large alveolar ridge fistula
  in dogs and cats
    management of, 813–814

Large trunk wounds, 847–872
  closure techniques, 851–869. See also
  specific types, e.g., Trunk flaps, in
  closure of large trunk wounds
    full-thickness wall defects, 865–869
    second-intention healing, 869
    tension relief, 851–855

Indolent pockets
  pseudohealing and, 689
Large trunk (*continued*)
  incisions in, 851
  skin stretching in, 851–855
  trunk flaps, 855–865
  X or double-Y closure, 855–857
  postoperative care, 870–871
  wound care
  principles of, 847–848
  wound closure
  principles of, 848–851
  Latissimus dorsi flaps
  in closure of large trunk wounds, 868–869
Leg folds
management of, 899
Legal considerations
  gunshot wounds in dogs and, 881–882
Lick granuloma
management of, 908–910
Limb wounds
  chronic
  management of, 905–910
  management of
  feline axillary wounds, 908
  hydroma, 905–907
  lick granuloma, 908–910
  pocketing wounds, 907–908
Lip avulsion
in dogs and cats, 795
Lip-to-lid flap
in eyelid wound reconstruction in dogs and cats, 808
Malnutrition
  wound healing effects of, 705–706
Maltodextrin
  in wound management, 746–747
Maturation
  in wound healing process, 676–677
Mechanical stimulants
  in wound management, 750
Metabolic diseases
  underlying
  wound healing effects of, 707–708
Methicillin-resistant *Staphylococcus aureus* (MRSA) infection, 910–911
Microvascular free tissue transfer
  in distal limb and paw injury reconstruction, 833–835
Microvascular paw pad transfer, 840
Moist wound healing
  in primary layer of bandage for wound healing in dogs and cats, 760–763
Molestation
wound, 695
Movement
wounds related to, 699
MRSA infection. See *Methicillin-resistant Staphylococcus aureus* (MRSA) infection
Multiple punctate relaxing incisions
  in distal limb and paw injury reconstruction, 822–823
Muscle flaps
  in closure of large trunk wounds, 867–869
Myocutaneous flaps
  in closure of large trunk wounds, 867–869
N
Nasal dermoid sinus cyst (NDSC)
  management of, 904–905
Nasal planum
  in dogs and cats
  resection of, 800–802
NDSC. See *Nasal dermoid sinus cyst (NDSC)*
Neoplasia
  wounds related to, 701
Nonadherent semiocclusive dressings
  in primary layer of bandage for wound healing in dogs and cats, 771–773
O
Ocular wounds
  penetrating
  gunshot wound–related
  in dogs
  management of, 881
Omentum
  in wound management, 747
Oronasal fistula
  in dogs and cats
  management of, 811–815
  central hard palate fistula, 814–815
  large alveolar ridge fistula, 813–814
  postoperative care, 815
  small alveolar ridge fistula, 811–813
Orthopedic conditions
  wounds related to, 697–698
Osteomyelitis
wounds related to, 697–698
Oxygen therapy
    in wound management, 749–750

P
Partial vulvar resection
    vulvar fold excision and, 925–926
Paw injuries, 819–845
    amputation injuries, 840–843
    causes of, 819
    classification of, 820–821
    evaluation of, 819–821
    injuries of
        interdigital wounds, 836–837
        reconstruction after
            wound healing complications, 836
        reconstruction after. See also specific techniques, e.g., Skin relaxing and stretching, in distal limb and paw injury reconstruction
        options for, 821–836
        second-intention healing in, 822
        skin relaxing and stretching in, 822–835
    weight-bearing, 837–840
    evaluation of, 837–838
    management of
        microvascular paw pad transfer in, 840
        paw pad abrasions, 838
        paw pad grafts in, 839–840
        paw pad lacerations, 838
        phalangeal fillet in, 838–839
        techniques in, 838–840
Paw pad abrasions
    management of, 838
Paw pad grafts, 839–840
Paw pad lacerations
    management of, 838
Paw pad wounds, 699
Perianal fistula
    anal stricture and, 922–924
Perineal region
    skin defects in, 921–922
Perineal wounds, 927–929
    surgery for
        preparation for, 927–928
Perivascular injections
    wound healing effects of, 704
Phalangeal fillet, 838–839
Pilonidal sinus
    management of, 902–904
    Plasmatic inhibition
        defined, 827
Platelet gel
    in wound management, 747
Pocketing wounds
    management of, 907–908
Polyurethane film
    in primary layer of bandage for
        wound healing in dogs and cats, 770–771
Polyurethane foam
    in primary layer of bandage for
        wound healing in dogs and cats, 767–768
Posttrauma patient assessment, 713–714
Premaxilla
    in dogs and cats
        resection of, 800–802
Pressure wounds, 695–697, 699
Presuturing
    in distal limb and paw injury reconstruction, 822
Problem wounds
    in cats, 707
        disrupted wounds, 693–695
        infections, 694
        pressure wounds, 695–697
        suturing nonviable tissue, 695
        types of, 693–708
        underlying hematoma, 694
Prosthesis(es)
    reconstruction with
        in closure of large trunk wounds, 866–867
Protein deficiency
    wound healing effects of, 705–706
Pseudohealing, 708
    indolent pockets in, 689
Pyoderma
    chronic fibrosing interdigital
        management of, 901–902
R
Radiation
    wound healing effects of, 706–707
Reverse saphenous conduit flap
    in distal limb and paw injury reconstruction, 831–833
S
Sacculectomy
    anal sac abscesses and, 919–921
Second-intention healing, 731–732, 869
in distal limb and paw injury
reconstruction, 822
Seroma(s)
underlying, 694
Shotguns, 874, 875
Single pedicle advancement flap
in eyelid wound reconstruction in dogs
and cats, 806–807
in small alveolar ridge fistula
reconstruction in dogs and cats,
811–813
Sinus(es)
defined, 902
dermal
disorders of
management of, 902–905
pilonidal
management of, 902–904
Sinus tracts
wounds related to, 699–701
Skin grafts
in distal limb and paw injury
reconstruction, 825–831
classification of, 826–827
donor site selection and graft
preparation, 829
graft inset, 829
healing of, 827
postoperative care and monitoring,
829–831
recipient site selection and
preparation, 828
Skin relaxing and stretching
in closure of large trunk wounds,
851–855
in distal limb and paw injury
reconstruction, 822–835
adjustable horizontal mattress
sutures, 824
distant flaps, 833
microvascular free tissue transfer,
833–835
multiple punctate relaxing
incisions, 822–823
presuturing, 822
reverse saphenous conduit flap,
831–833
skin grafts, 825–831
tissue expanders, 824–825
V-to-Y plasty, 824
Z-plasty, 823
Skin wounds. See also specific types, e.g.,
Intertriginous disorders
management of, 895–912
chronic limb wounds, 905–910
dermal sinuses, 902–905
intertriginous disorders, 895–902
Small alveolar ridge fistula
in dogs and cats
management of, 811–813
Soft-tissue wound
gunshot-related
in dogs
management of, 878–879
Spider(s)
brown recluse
wound healing effects of,
704–705
Spinal trauma
gunshot wound–related
in dogs, 880
Splint(s)
in wound management in dogs and cats,
779–780
Splint-induced wounds, 696–697
Staphylococcus aureus
methicillin-resistant
infection due to, 910–911
Subcutis
in cutaneous healing, 689–690
Subdermal plexus flaps
in dorsum of head reconstruction in
dogs and cats, 805
Sugar
in wound management, 748–749
Superficial lateral caudal axial pattern flap
in closure of large trunk wounds, 863
Surgically closed wounds
bandages for, 776
Suture(s)
adjustable horizontal mattress
in distal limb and paw injury
reconstruction, 824
in closure of large trunk wounds,
853–855
Suture patterns
in wound closure of large trunk
wounds, 850
Suturing nonviable tissue, 695
T
Tail
amputation of, 922–923
cutaneous wounds around, 917–919
ingrown, 926–928
Tail avulsion
dorsal pelvic herniation due to, 916–917
Tail folds, 926–928
management of, 898
Tail wounds, 927–929
tail avulsion
dorsal pelvic herniation due to, 916–917
traumatic, 914–916
TCC. See Tripeptide-copper complex (TCC)
Tension
wound, 693–694
Tension relief
in closure of large trunk wounds, 851–855
Thoracodorsal axial pattern flaps, 860–861
Tissue expanders
in distal limb and paw injury
reconstruction, 824–825
Topical wound debridement, 753–755
Transposition flap
in small alveolar ridge fistula
reconstruction in dogs and cats, 813
Transposition flaps
in closure of large trunk wounds, 858
in eyelid wound reconstruction in
dogs and cats, 808
Trauma
brain
gunshot wound–related
in dogs, 880
spinal
gunshot wound–related
in dogs, 880
Traumatic cleft palate
in dogs and cats
management of, 815–816
Traumatic wound care
for large trunk wounds
principles of, 847–848
Tripeptide-copper complex (TCC)
in wound management, 745–746
Trunk flaps
in closure of large trunk wounds, 855–865
  advancement flaps, 857
  axial pattern flaps, 859–863
described, 855–857
  forelimb and flank fold flaps, 858–859
  omental flaps, 864–865
  rotational flaps, 857–859
  transposition flaps, 858
Trunk wounds
large, 847–872. See also Large trunk wounds

U
Ulcer(s)
decubital, 695–696
Underlying hematoma, 694
Underlying metabolic disease
wound healing effects of, 707–708
Underlying seroma, 694

V
V-to-Y plasty
in distal limb and paw injury
reconstruction, 824
Vulvar fold excision
partial vulvar resection and, 925–926
Vulvar folds
management of, 899

W

Wet-to-dry bandages
in primary layer of bandage for
wound healing in dogs and cats, 759–760
Wound(s)
acute, 697–708
axillary, 699
feline, 908
bandage-induced, 696–697
bite. See Bite wounds
burn
in dogs, 886–892. See also Burn
wounds, in dogs
cast-induced, 696–697
cervical
gunshot wound–related
in dogs, 880–881
chronic, 697–708
disrupted, 693–695
evaluation of
initial wound assessment, 714–722
patient assessment in, 713–722
exposed bone–related, 698
eyelid
in dogs and cats
management of, 806–808
facial
in dogs and cats, 793–817. See also Head and facial wounds, in dogs and cats
gunshot. See Gunshot wounds
hard-to-heal
management of, 693–711
Wound(s) (continued)
	head
in dogs and cats, 793–817. See also Head and facial wounds, in dogs and cats
infection-related, 701–703
inguinal, 699
interdigital, 836–837
large trunk, 847–872. See also Large trunk wounds
limb, 905–910. See also Limb wounds
movement- and pressure-related, 699
neoplasia-related
ocular
penetrating gunshot wound–related
in dogs, 881
orthopedic condition–related, 697–698
over joints, 699
paw pad, 699
perineal, 913–929. See also Perineal wounds
perivascular injection effects on, 704
pocketing
management of, 907–908
problem, 693–708. See also Problem wounds
radiation effects on, 706–707
sinus tract–related, 699–701
skin
management of, 895–912. See also Skin wounds, management of
splint-induced, 696–697
surgically closed
bandages for, 776
tail, 913–929. See also Tail wounds
trunk
large, 847–872. See also Large trunk wounds

Wound closure
for large trunk wounds
described, 848
incision orientation in, 848
principles of, 848–851
suture patterns in, 850
undermining in, 849–850
of large trunk wounds
drainage in, 850–851

Wound contracture, 709

Wound debridement
topical, 753–755

Wound healing
abnormal, 709
after distal limb and paw injury
reconstruction
complications of, 836

angiogenesis in, 672–673
chemotherapy and, 703–704
contraction in, 675–676
 corticosteroids and, 703–704
cutaneous
clinical application of, 690–691
in dogs vs. cats, 687–692
first-intention, 688
second-intention, 688–689
subcutis in, 689–690
debridement in, 670–671
enhancement of, 13–17, 740–750. See also Wound management, topical and systemic medications in
envenomization effects on, 704–705
epithelialization in, 674–675
fibroplasia in, 673–674
immediate wound reaction in, 667–670
inflammation in, 670–671
initiation of, 667–670
malnutrition effects on, 705–706
maturation in, 676–677
mediators of, 667–669
moist
in primary layer of bandage for
wound healing in dogs and cats, 760–763
repair in, 671–676
second-intention, 731–732. See Second-intention healing
stages of, 376–1-19
clinical relevance of, 677–683
inflammatory and debridement phase, 678, 679, 682–683
maturation phase, 678, 683
recognition of, 677–678
repair phase, 678, 683
topical agents for, 680–682
underlying metabolic disease effects on, 707–708
wound dressings in
indications for, 680–682

Wound infections, 910–911

Wound management
closure in
decision related to, 722–731
delayed primary and secondary, 731–732
in dogs and cats, 759–791
bandages, 759–791. See also Bandage(s), in wound management in dogs and cats
casts, 779–780
costs of, 784
splints, 779–780
drainage in, 732–734
evaluation in
initial wound assessment, 714–722
patient assessment
posttrauma-related, 713–714
follow-up care, 735
initial, 713–738
for large trunk wounds
principles of, 847–848
reassessment in, 735
second-intention healing in, 731–732
topical and systemic medications in,
739–757
acemannan, 746
alginites, 741
chitosan, 747
collagen, 745
ECM bioscaffolds, 745
ECM–derived dressing in, 745
honey, 748
hydrogels, 741
hydrolloids, 740–741
in infection control, 750–753
maltodextrin, 746–747
omentum, 747
oxygen therapy, 749–750
platelet gel, 747
sugar, 748–749
TCC, 745–746
topical wound debridement,
753–755
Wound molestation, 695
Wound tension, 693–694

X
X or double-Y closure
in closure of large trunk wounds,
855–857
X-Banders
in closure of large trunk wounds,
852–853

Z
Zinc deficiency
wound healing effects of,
705–706
Z-plasty
in distal limb and paw injury
reconstruction, 823
