Anesthesia/anesthetics
   for endoscopy, 31–44
      introduction, 31–32
      management of, 36
      monitoring of, 35–36
      pneumoperitoneum effects of, 32–33
      premedication, induction, and maintenance agents, 33–35
      preoperative preparation, 33
      recovery from, 41
   for laparoscopic surgery, 36–38
   for thoracoscopic surgery, 38–40
Automated suturing devices
   in laparoscopic surgery, 18–28
      blunt dissection probe, 20–21
      dissecting instruments, 18
      EndoStitch, 18
      energy-based devices, 22
      5 mm miniretractor, 21
      laparoscopic aspirator/lavage with monopolar hook, 21
      laparoscopic stapling, 25–28
      monopolar pencil electrode extensions, 21
      roticulating Maryland dissector, 19–20
      SILS Stitch, 18
      ultrasonic energy devices, 24–25
      vessel-sealing devices, 22–23
Bladder
   overactive
      botulinum-A toxin injection for, 132
Bladder masses
   benign
      endoscopic polypectomy for, 128–129
Bladder stone removal
   advances in, 126–128
      cystoscopic-guided stone basket retrieval, 126–127
      laser lithotripsy, 127
      PCCL, 127–128
Blunt dissection probe
   in laparoscopic surgery, 20–21
Botulinum-A toxin injection
   for DUD or overactive bladder, 132
Bulking agent injections
   in USMI management, 129–131

C
Cat(s)
   ureteral obstruction management in
      SUB device in, 117
Chylothorax
   VATS for, 162–167
CMM extirpation. See Cranial mediastinal mass (CMM) extirpation
Colonic stents, 94
Colopexy
   LA, 56–57
Contigen (glutaraldehyde cross-linked bovine collagen)
   in ureteral obstruction management, 131
Cranial mediastinal mass (CMM) extirpation, 166
Cranial mediastinal neoplasia
   VATS for, 149–151
Cryptorchidectomy
   LA, 53–54
   single-port procedure in, 75–76
Cystopexy
   LA, 49–50
Cystoscopic-guided laser ablation
   of ectopic ureters, 123
Cystoscopic-guided stone basket retrieval
   in bladder stone removal, 126–127
Cystostomy
   tube
      LA, 50–51

D
Detrusor reflex dyssynergia (DUD)
   botulinum-A toxin injection for, 132
Dissecting instruments
   in laparoscopic surgery, 18
Dog(s)
   male
      perineal access for urethrocystoscopy in, 125–126
      ureteral obstruction management in, 121–124
DUD. See Detrusor reflex dyssynergia (DUD)

E
Ear
   anatomy of, 174
Ectopic ureters
   cystoscopic-guided laser ablation of, 123
EndoCone port, 66
Endomicroscopy, 106–108
Endoscopic gastropexy, 108–110
Endoscopic laser ablation
  for vaginal remnants
    in ureteral obstruction management, 131–132
Endoscopic polypectomy
  for benign bladder masses, 128–129
Endoscopic retrograde cholangiopancreatography (ERCP), 98–103
  complications of, 99–100
  described, 98–99
  follow-up and clinical implications, 100
  limitations and future considerations, 100–103
  outcomes, 100–103
  postoperative care, 100
  procedure, 99
Endoscopic retrograde pancreatography (ERP), 98–103
  complications of, 99–100
  described, 98–99
  follow-up and clinical implications, 100
  limitations and future considerations, 103
  outcomes, 100–103
  postoperative care, 100
  procedure, 99
Endoscopic surgery
  complications of, 137–141
  conversion to open surgery, 139–141
Endoscopic ultrasonography, 94–96
Endoscopic ultrasound–guided fine needle aspiration
  of pancreas, 96–98
Endoscopy
  anesthesia for, 31–44 (See also Anesthesia/anesthetics, for endoscopy)
    flexible
      advances in, 85–112 (See also Flexible endoscopy, advances in)
    urinary tract, 113–135 (See also Urinary tract endoscopy)
EndoStitch
  in laparoscopic surgery, 18
Energy-based devices
  in laparoscopic surgery, 22
Enseal tissue sealing device
  in laparoscopic surgery, 23
Enterostomy tube placement
  LA, 56
ERCP. See Endoscopic retrograde cholangiopancreatography (ERCP)
ERP. See Endoscopic retrograde pancreatography (ERP)
ESWL. See Extracorporeal shock-wave lithotripsy (ESWL)
Extracorporeal shock-wave lithotripsy (ESWL)
  in nephrolithiasis, 114–115
F
Female reproductive tract
  LA procedures of, 51–53
Fine needle aspiration
   endoscopic ultrasound–guided
      of pancreas, 96–98
5 mm miniretractor
   in laparoscopic surgery, 21
Flexible endoscopy
   advances in, 85–112 (See also specific types, e.g., Natural orifice transluminal
      endoscopic surgery (NOTES))
   endomicroscopy, 106–108
   endoscopic gastropexy, 108–110
   endoscopic ultrasonography, 94–96
   endoscopic ultrasound–guided fine needle aspiration of pancreas, 96–98
   ERP and ERCP, 98–103
   introduction, 85
   NOTES, 103–106
equipment for, 86–89
   endoscope
      components, 86–87
      instruments, 89
      sizes, 88–89
      support items, 87–88
   general, 90–92
   indications for, 86
   introduction, 85
   stent placement for benign or malignant obstruction, 92–94
Force Triad (FT) energy platform
   in laparoscopic surgery, 23
FT energy platform. See Force Triad (FT) energy platform

G
Gastrointestinal tract
   LA procedures of, 54–57
      approach to, 55
      colopexy, 56–57
      enterostomy tube placement, 56
      gastropexy, 55
      patient preparation and positioning for, 55
      small intestinal biopsy or resection/anastomosis, 56
Gastropexy
   endoscopic, 108–110
   laparoscopic-assisted, 55
   with ovariectomy
      single-port procedure in, 73–75
GelPOINT access system, 66–67
Glutaraldehyde cross-linked bovine collagen (Contigen)
   in ureteral obstruction management, 131

H
Hepatic biopsy
   single-port procedure in, 76–78
I
Idiopathic renal hematuria (IRH)
in nephrolithiasis, 115

Intestinal surgery
LA
  single-port procedure in, 78–80
IRH. See Idiopathic renal hematuria (IRH)

K
Kidney(s)
  endoscopy of, 114–117

L
Laparoscopic aspirator/lavage with monopolar hook
  in laparoscopic surgery, 21
Laparoscopic-assisted (LA) procedures, 45–61. See also Urinary bladder; specific sites
  and procedures, e.g., Cystopecty
  complications of, 58
  contraindications to, 46
  for female reproductive tract, 51–53
  of gastrointestinal tract, 54–57
  indications for, 46
  introduction, 45–46
  of male reproductive tract, 53–54
  patient considerations and positioning for, 46–47
  postoperative care, 58–59
  single-port
    in intestinal surgery, 78–80
    splenectomy, 57–58
    of urinary bladder, 47–51
Laparoscopic skills training, 1–12. See also Veterinary Applied Laparoscopic Training
  (VALT) laboratory; Veterinary assessment of laparoscopic skills (VALS) laparoscopic
  simulation training program
  introduction, 1–2
  maintaining skills, 10
  simulation models in, 2
  surgeon self-training in, 8–9
  video games in, 9
Laparoscopic stapling, 25–28
Laparoscopic surgery, 66–67
  advances in, 63–84
    introduction, 63
    single-port access surgery, 63–65
    single-port entry devices, 65–68
  anesthesia for, 36–38
  equipment and instrumentation in, 13–29
    advances in, 13–29
      automated suturing devices, 18–28 (See also Automated suturing devices, in
      laparoscopic surgery)
Laparoscopic (continued)
  introduction, 13
  laparoscopic access in, 14
    optical port in, 14
    threaded metal port in, 14
  single incision, 14–17
    barbed sutures in, 16–17
    suturing in, 16
  skills training in, 1–12 (See also Laparoscopic skills training)
LA procedures. See Laparoscopic-assisted (LA) procedures
Laser lithotripsy
  in bladder stone removal, 127
Left ligamentum arteriosum
  VATS for, 151–154
Left ligamentum division, 166
LigaSure
  in laparoscopic surgery, 22–23
Lobectomy
  lung
    exploratory and partial, 159–162, 167
    for neoplasia, 166–167
Lung lobectomy
  exploratory and partial
    for spontaneous pneumothorax, 159–162, 167
    for neoplasia, 166–167

M

Male reproductive tract
  LA procedures of, 53–54
Mediastinal neoplasia
  cranial
    VATS for, 149–151
Minimally invasive surgery (MIS)
  laparoscopic skills training for, 1–12 (See also Laparoscopic skills training)
MIS. See Minimally invasive surgery (MIS)
Monopolar pencil electrode extensions
  in laparoscopic surgery, 21

N

Natural orifice transluminal endoscopic surgery (NOTES), 103–106
  complications of, 104–105
  described, 103–104
  follow-up and clinical implications, 105
  limitations and future considerations, 105–106
  outcomes, 105
  postoperative care, 105
  procedure, 104
Neoplasia
  cranial mediastinal
VATS for, 149–151
lung lobectomy for, 166–167
pericardial effusion and
VATS for, 147–149
pulmonary
VATS for, 154–159
Nephrolithiasis
endoscopic approach to, 114–117
ESWL, 114–115
IRH, 115
nephrolithotomy, 115
sclerotherapy, 115
ureteroscopy, 117
Nephrolithotomy
endoscopic
in nephrolithiasis, 115
NOTES. See Natural orifice transluminal endoscopic surgery (NOTES)

O
Otoscopy, 171–179
advances in, 171–179
anatomy related to, 174
equipment for, 171–174
examination prior to, 175–178
indications for, 174–175
Ovariectomy
with gastropexy
single-port procedure in, 73–75
single-port procedure in, 70–73
Ovariohysterectomy
LA, 52–53
Overactive bladder
botulinum-A toxin injection for, 132

P
Pancreas
endoscopic ultrasound–guided fine needle aspiration of, 96–98
PCCL. See Percutaneous cystolithotomy (PCCL)
Percutaneous cystolithotomy (PCCL)
in bladder stone removal, 127–128
Pericardectomy, 165
thoracic duct ligation and, 167
Pericardial effusion
neoplasia and
VATS for, 147–149
Persistent right aortic arch
VATS for, 151–154
Pneumoperitoneum
anesthesia for endoscopy effects on, 32–33
Pneumothorax
  spontaneous (See Spontaneous pneumothorax)

Polypectomy
  endoscopic
    for benign bladder masses, 128–129
  urinary bladder
    LA, 49

Pulmonary neoplasia
  VATS for, 154–159

R

Reproductive tract
  female
    LA procedures of, 51–53
  male
    LA procedures of, 53–54

Rotticulating Maryland dissector
  in laparoscopic surgery, 19–20

S

Sclerotherapy
  in nephrolithiasis, 115

SILS port, 65–66

SILS Stitch. See Single incision laparoscopic surgery (SILS) Stitch

Single incision laparoscopic surgery (SILS) Stitch
  in laparoscopic surgery, 18

Single-port access surgery, 63–65
  described, 63–64
  human applications, 64
  innovative adaptations in, 69–70
  principles of, 64
  procedures, 70–80
    cryptorchidectomy, 75–76
    hepatic biopsy, 76–78
    LA intestinal surgery, 78–80
    ovariectomy, 70–73
    ovariectomy with gastropexy, 73–75
  single-port entry devices, 65–68 (See also Single-port entry devices)
  standard trocars used in
    insertion techniques, 68–69
  veterinary applications, 65

Single-port entry devices
  advances in, 65–68
  EndoCone port, 66
  GelPOINT access system, 66–67
  insertion techniques, 65
  SILS port, 65–66
  in single-port access surgery, 65–68
  TriPort system, 67–68
Small intestinal biopsy or resection/anastomosis
LA, 56

Splenectomy
LA, 57–58

Spontaneous pneumothorax
pulmonary exploratory and partial lung lobectomy for, 167
VATS for, 159–162

Stapling
laparoscopic, 25–28

Stent(s)
colic, 94
placement of
flexible endoscopy in, 92–94
ureteral
in cats, 120–121
in dogs, 121–124

Subcutaneous ureteral bypass (SUB) device
in ureteral obstruction management
in cats, 117

SUB device. See Subcutaneous ureteral bypass (SUB) device

Suture(s)
barbed
in single incision laparoscopic surgery, 16–17

Suturing
in single incision laparoscopic surgery, 16

Suturing devices
automated
in laparoscopic surgery, 18–28 (See also Automated suturing devices, in laparoscopic surgery)

T

Thoracic duct ligation, 163–165
pericarpectomy and, 167

Thoracoscopic surgery
anesthesia for, 38–40

Traditional ureteral surgery
in ureteral obstruction management, 117

TriPort system, 67–68

Tri-Staple technology
in laparoscopic stapling, 25–28

Tube cystostomy
LA, 50–51

Tympanic cavity
aftercare, 179
assessment of, 178
treatment of, 178–179

U

Ultrasonic energy devices
in laparoscopic surgery, 24–25
Ultrasonography
endoscopic, 94–96
Ureter(s)
ectopic
cystoscopic-guided laser ablation of, 123
Ureteral obstructions
diagnostic approach to
benign obstructions, 117–121
SUB device in cats, 117
traditional ureteral surgery for, 117
ureteral stents, 120–124
malignant obstructions
in dogs, 123
Ureteral stents
in cats, 120–121
in dogs, 121–124
Ureteroscopy
in nephrolithiasis, 117
Urethral sphincter mechanism incompetence (USMI)
treatment of
bulking agent injections in, 129–131
Urethrocystoscopy
perineal access for
in male dogs, 125–126
Urinary bladder
LA procedures of, 47–51
approach to, 48
cystopectomy, 49–50
patient preparation and positioning for, 48
tube cystostomy, 50–51
urinary bladder polypectomy, 49
urinary calculus removal, 48–49
Urinary bladder polypectomy
LA, 49
Urinary calculus removal
LA, 48–49
Urinary tract endoscopy
advances in, 113–135
bladder stone removal, 126–128
botulinum-A toxin injection for DUD, 132
bulking agent injections for USMI, 129–131
Contigen, 131
diagnostic laser ablation for vaginal remnants, 131–132
diagnostic polypectomy for benign bladder masses, 128–129
perineal access for urethrocystoscopy in male dogs, 125–126
renal interventions, 114–117
ureteral obstructions, 117–124
introduction, 113–114
USMI. See Urethral sphincter mechanism incompetence (USMI)
V

Vaginal remnants
   endoscopic laser ablation for
      in ureteral obstruction management, 131–132
VALS laparoscopic simulation training program. See Veterinary assessment of
   laparoscopic skills (VALS) laparoscopic simulation training program
VATS. See Video-assisted thoracic surgery (VATS)
Vessel-sealing devices
   in laparoscopic surgery, 22–23
Veterinary Applied Laparoscopic Training (VALT) laboratory
   training program at
      feedback from, 8
      motivation of trainees in, 6–7
      opportunity to practice in, 8
      setting up, 2–8
      training tasks, 3–6
Veterinary assessment of laparoscopic skills (VALS) laparoscopic simulation training
   program, 1–12. See also Laparoscopic skills training; Veterinary Applied
   Laparoscopic Training (VALT) laboratory
Video-assisted thoracic surgery (VATS)
   advances in, 147–169
      chylothorax, 162–167
      cranial mediastinal neoplasia, 149–151
      left ligamentum arteriosum, 151–154
      pericardectomy and pericardial window, 165–166
      pericardial effusion and neoplasia, 147–149
      for persistent right aortic arch, 151–154
      pulmonary neoplasia, 154–159
      spontaneous pneumothorax, 159–162
Video-otoscopy
   indications for, 174–175
Virtual reality (VR) training
   laparoscopic, 1–12 (See also Veterinary Applied Laparoscopic Training (VALT)
   laboratory; Veterinary assessment of laparoscopic skills (VALS) laparoscopic
   simulation training program)
VR training. See Virtual reality (VR) training
