Common Neurologic Problems

Preface

In this volume of *Veterinary Clinics of North America: Small Animal Practice*, we have attempted to present the most current information available on those neurologic problems most frequently seen in veterinary practice. The text is presented in a problem-solving manner to serve as a ready reference for the practitioner when one of these problems is encountered. Thorough discussions on the latest therapeutic recommendations and usual outcomes are also included. In addition, two articles are included dealing with the most frequently used neurologic diagnostic tools, cerebrospinal fluid analysis and neuroradiography.

Many more neurologic problems that are less frequently encountered in veterinary practice have not been addressed in this issue. For further information, please consult your nearest veterinary neurologist and the many excellent texts on veterinary neurology currently available.
